

iOS 8 - A Quick Preview

“iOS 8 is all set to be launched this fall” – the moment this news broke out, everyone from the development world rushed into forums and news platforms to grab the early advantage.

The official website of Apple describes their iOS 8 breakout as a well-timed and conclusively drawn iPhone technology restoration. The top officials in the wing find iOS 8 as the biggest release ever. They consider it as the result of most adaptive measures and compelling technology penetration besides being the most user-oriented outfit ever.

Let's see what the Apple experts have to say about the latest endeavor.

“Special things deserve special mention and iOS 8 has definitely something unique and important about it. The new iOS is the smartly sorted, finely detailed and heavily resourced system ever for iPhone. It has beautifully relayed the high-end technology topping it up with most amazing features that would strike next big leap for the smart phone. iOS 8 is all set to reflect the futuristic mobile phone needs for its users and offer great opportunities to iPhone app developers. Professionals are going to get the most out of this upgrade in technology.”

iOS 8 is more open, it's time saving, it emphasizes on details and is easy to operate and most importantly it will be available to everyone with iPhone 4s and later. Preliminary features including Photos, Messaging, Storing and Sharing have acquired important place in the plan. They have been enhanced with excellent details and interactive base. Like OS X Yosemite, iOS 8 includes Continuity allows WiFi hotspot for your iPad without any configuration and also be able to access iCloud Drive.

To extend the reach of their apps, developers have a greater SDK support by their side. Now they can use new Apple tools to take advantages from iCloud, Touch ID and more, thereby extending the ability to build dynamic and concept-rich applications incredibly.

The new iOS allows developers to add custom action buttons which lets them to add watermarks, print documents and translate texts on the go from anywhere they wish.

Apart from this, you can bank on many new features that would grant you great distinction over earlier facilities. More sharing options are now open to developers who can now use various social websites that matter to them. Developers can also embed their favorite tools and filters for photo editing and apply third-party effects on photos.

As a user, iOS 8 allows you a better control over notifications as you can add widgets to get alerts on latest news and reports from your favorite news app. Keyboard, Documentation, Spotlight, Theme Assembling, and Information Processing, Gallery Management, Cloud Storage (phew... the list goes on) all have a new way to react to your needs.

The best part of all is the ability of iOS 8 to bring your iPhone, iPad and Mac together, allowing you a better perspective of multiple device management. Have you ever through of answering your calls through your iPad or Mac? Now it is possible with iOS 8 seamlessly connecting your Apple devices.

It assures you of high level functional order to have smarter way out to execute things. With this level of transition and your smart phone sorted so nicely, you can think of a great penetration through your day-to-day requirements with futuristically groomed features never seen before. iOS 8 has it BIG!
